Sergeant Marcella S. Solis, Star 1127
Chicago Police Department
Bureau of Internal Affairs
General Investigations Section
3510 S. Michigan Ave
Chicago, IL 60653

Dear Sergeant Solis:

At your request, I reviewed additional information provided by donor # 1049917, whose hair specimen was collected on Nov 2, 2011 and tested positive for cocaine metabolites. Specifically, I reviewed a letter from [REDACTED] dated Dec 21, 2011 in which [REDACTED] described the topical [REDACTED] medications administered to the donor during office visits on July 15, 2011 and Sept 30, 2011. Also provided was a Wikipedia article entitled "list of cocaine analogues."

While topical anesthetics of the "caine" type were given to the donor during these office visits mentioned above, none of the topical anesthetics or their metabolites would be confused with the cocaine metabolites measured by GC-MS in the donor's hair sample collected on Nov 2, 2011. Therefore, this additional clinical information does not change my original opinion that no medical use for the cocaine positive has been established.

The Wikipedia article has no bearing on this issue.

Respectfully submitted by [REDACTED]
